

Sleeve print proof — Route B, warm white board

BRANDING UPDATED 9 SEPTEMBER 2026 · GEOMETRY SUPERSEDED · NOT FOR PRINT

DO NOT SEND TO A PRINTER. THE GEOMETRY ON THESE PAGES IS SUPERSEDED (2026-09-09).

Vitall's own cutter template **Capillary Test Kit Artwork for Window 169x122x23mm.pdf** arrived and is now in **assets/packaging/dieline/**. It disproves the fold assumption these pages are drawn to. The flat is **169 × 304 mm** with panels of **122 / 23 / 122 / 22**, so there is a **23 mm spine panel** and each face is **169 × 122 mm**, not the 179 × 152 mm halves drawn here. The front face is **30 mm too tall and 10 mm too wide** on every page below, and the layout needs re-drawing rather than scaling. **What IS current on these pages is the branding:** the Interlocked AP (no container) and the two-word ANDRO PRIME wordmark, both from the drawn vector masters, replaced the boxed monogram and the one-word wordmark on 2026-09-09.

Palette variant. Ivory #F4F1EA board, #141414 ink. The research-led default: warm white rather than surgical white, on the grounds that pure white reads clinical in a health frame. **The palette call is still open**, so this proof exists in both; geometry and copy are identical between them.

Route B from **concept-sleeve-fronts-v7-two-routes.html** transposed onto the real dimensions from Vitall's artwork file. Fronts are lifted verbatim from that concept, with one copy change. The back is new: Route B had fronts only, so it has been drawn in the same system and laid out around the compliance window.

THE ONE COPY CHANGE

"Thresholds signed off by Dr Ewa Lindo, GMC-registered GP" is removed from all three fronts. Removed programmatically and asserted at exactly three matches, so it cannot have been missed on one kit. **"ANALYSED IN A UKAS-ACCREDITED UK LABORATORY" stays.**

Worth a decision rather than an assumption: the Ewa attribution still appears on the live site and in approved copy. Taking it off the pack only is fine, but if the intent is that it is not needed anywhere, that is a decision sweep, not a packaging edit.

DIMENSIONS

Flat trim	179.00 × 304.00 mm → 169.00 × 304.00 mm per the cutter template. The 179 was the bleed box, not the trim (5 mm each side).
Folded face	179.00 × 152.00 mm → 169.00 × 122.00 mm . There is a separate 23 mm spine panel between the faces.
Fold	152.00 mm from trim top, assumed → panels 122 / 23 / 122 / 22 mm from the top, plus a ~15 mm glue tab, per the cutter template. The assumption was flagged honestly here and has now been disproved: there is a 23 mm spine panel , so the sleeve does not fold in half.
Bleed	3 mm all round → page is 185 × 310 mm
Die-cut aperture	DIE: 118.00 × 67.00 mm, corner radius r5.0 , from Vitall's cutter template. Our 108.00 × 57.00 is the same hole with the required 5 mm artwork bleed taken in, so both figures were right all along and the dispute is closed. corner radius — 3.2 mm → r5.0 confirmed. Back panel only (Keith, 2026-09-09): the front face carries no window.

WHAT THE APERTURE DOES TO ROUTE B

- **It does not touch the fronts.** Route B's marker table, headline and spine are all on the front face, which carries no window (confirmed below).
- **The back is banded around it:** brand and next step above, window clear, regulatory below. There is no room for anything else.
- **The spine flips to the right** on the back in reading orientation, so it wraps the same physical edge as the front's after the fold.
- **No QR on the sleeve.** Per the /activate deprecation the sampling QR belongs on the insert, and the kit is already linked at order creation

Sleeve back — reading orientation

UNIVERSAL ACROSS ALL THREE KITS • GEOMETRY SUPERSEDED 2026-09-09 • DO NOT PRINT

Band layout, forced by the aperture

Above 0 – 47.50 mm brand + what to do next

Cut 47.50 – 104.50 mm board REMOVED; Vital's label on the box shows through

Below 104.50 – 152.00 mm regulatory fine print

Why the black spine is on the right here

The fold preserves left-to-right, and the back is seen from the other side, so a spine drawn on the right in reading orientation wraps the same physical edge as the front's.
